

Create and manage as many sites as you want!

Ametys is natively multisite and allows creation of additional sites to the main site, research and sharing content between sites.

The creation and management of sites is done by a central administrator, who give the rights to "site manager" that can later assign permissions, create standard profiles, create pages ...

Try out our other demo sites : the blog, the event site... Share contents between sites and create a new site in a few clicks !
