

Retrieve a list of contents

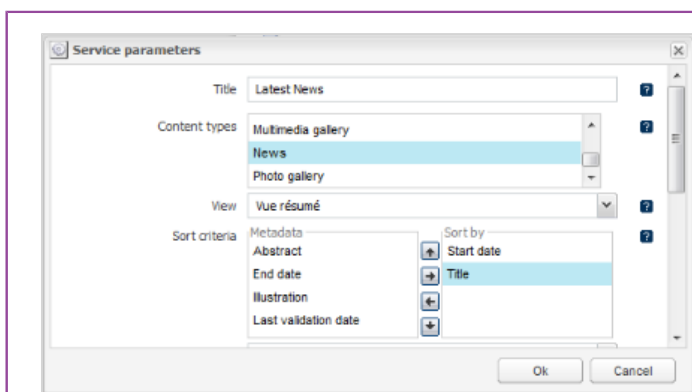

This service offers the possibility to retrieve a list of contents from parameters defined by the contributor.

This service can be used for example:

- * to list the news of a section
- * to list the important news on home page
- * to list the article tagged "FOCUS" on the left column of a page
- * ...

The service has the following parameters :

Parameters	Description	Mandatory
Title	The service title. Leave empty if you do not want any title.	no
Content types	The content type(s) to display.	no

	<i>Leave empty to display all available content types.</i>	
View	The view for contents digest. <i>The available views depend on the selected content types.</i>	yes
Sort criteria	Fields that will determine the display order. <i>The fields depend on the selected content types.</i>	no
Search context	The search context to choose among the current site, the others sites or the child pages	yes
Language	The language of content to search for among the current sitemap language or the others languages	yes
Max results	Maximum of results to display. <i>Leave empty to display all contents.</i>	no
Results per page	When a number is set, results are paginated. E.G., 25 results with 10 results per page will lead to 3 result pages (1 to 10, 11 to 20 and 21 to 25). <i>You can leave that field empty if you do not want pagination.</i>	no
Tags	To restrict contents digest to contents tagged with specific tags	no
