

# Retrieve a list of contents

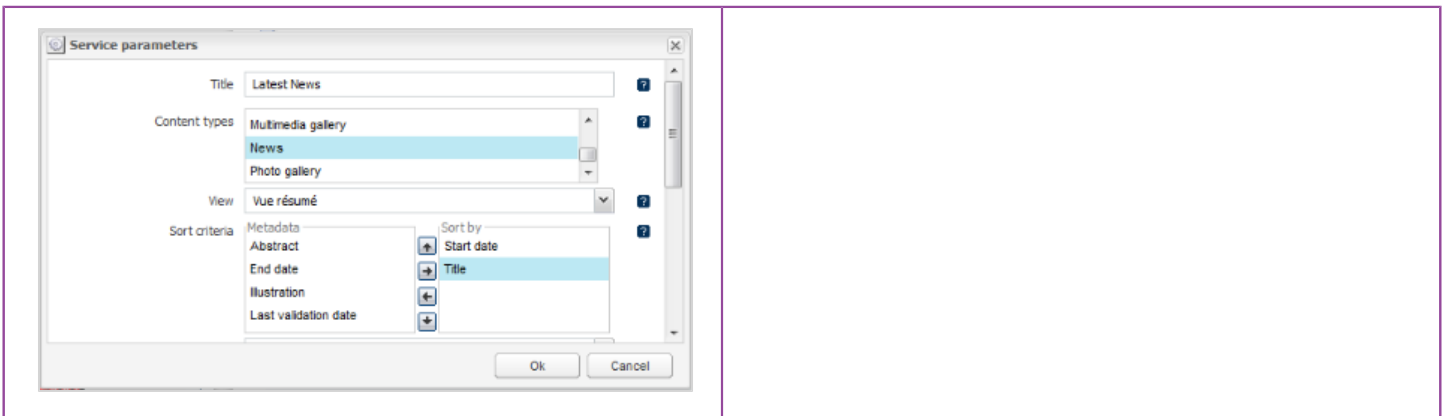

This service offers the possibility to retrieve a list of contents from parameters defined by the contributor.

This service can be used for example:

- \* to list the news of a section
- \* to list the important news on home page
- \* to list the article tagged "FOCUS" on the left column of a page
- \* ...

The service has the following parameters :

Parameters	Description	Mandatory
<b>Title</b>	The service title. Leave empty if you do not want any title.	no
<b>Content types</b>	The content type(s) to display.	no

	<i>Leave empty to display all available content types.</i>	
<b>View</b>	The view for contents digest. <i>The available views depend on the selected content types.</i>	yes
<b>Sort criteria</b>	Fields that will determine the display order. <i>The fields depend on the selected content types.</i>	no
