About

Ametys is a **java open source** web content management system (WCMS) software which combines content richness with a **user- friendly** interface.

Ametys CMS is a multi-purpose web factory. It can run corporate websites, blogs, portals and corporate wikis on the same server.

Ametys provides the most **intuitive look-and-feel** you can find among open source CMS**.** It is very close to "Microsoft Office" applications, hence directly useable by any contributor.

Ametys was first developed in 2003 by Web and Java passionated experts. It is now actively developed by 20 people and distributed worldwide by third-party integrators.

Feel free to contact us for an online demonstration.
